

### 6.3.37 Sandeel (*Ammodytes* spp.) in Division IVa, SA 5 (Northern North Sea, Viking and Bergen banks)

#### ICES stock advice

ICES advises that when the precautionary approach is applied, catches should not increase unless there is evidence that this will be sustainable. This corresponds to zero catch in 2015.

#### Stock development over time

Catch statistics are available for sandeel area 5 (SA 5). No landings have occurred since 2004 (except for 4 t landed in 2007). The available information is inadequate to evaluate stock status or trends. The state of the stock is therefore unknown.

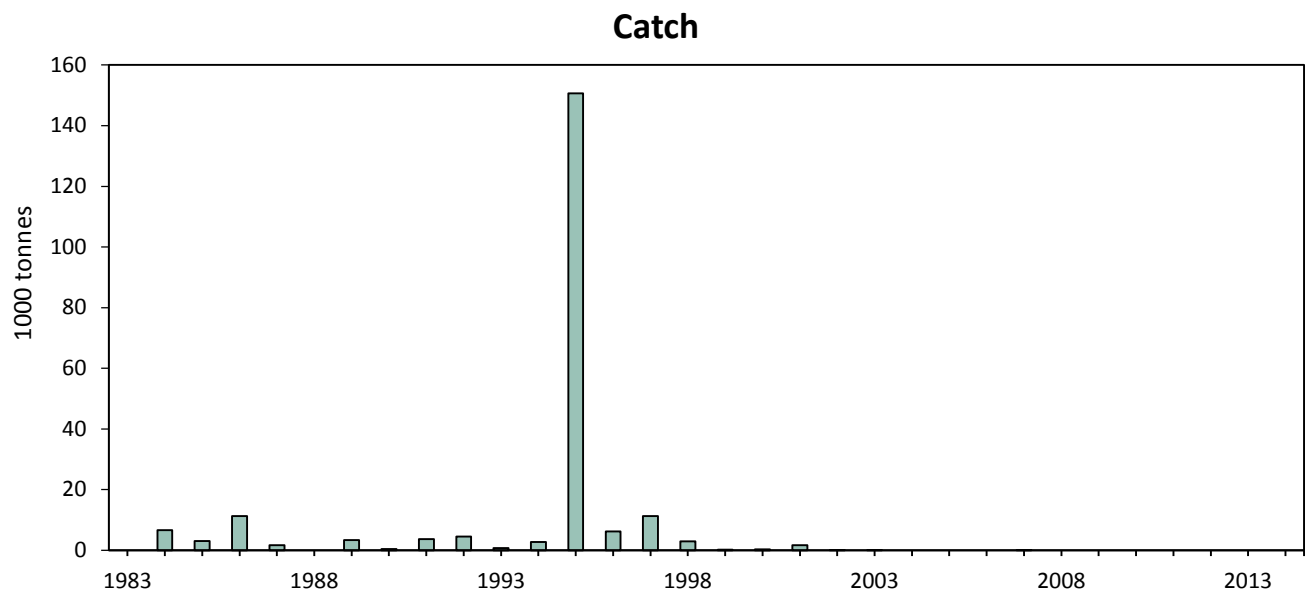

Figure 6.3.37.1 Sandeel in the Viking and Bergen banks (SA 5). ICES estimates of catch (in thousand tonnes).

#### Stock and exploitation status

Table 6.3.37.1 Sandeel in the Viking and Bergen banks (SA 5). State of the stock and fishery, relative to reference points.

		Fishing pressure			Stock size					
		2012	2013	2014	2013	2014	2015			
Maximum Sustainable Yield	$F_{MSY}$	?	?	?	Undefined	MSY	?	?	?	Undefined
Precautionary approach	$F_{pa}$ , $F_{lim}$	?	?	?	Undefined	$B_{pa}$ , $B_{lim}$	?	?	?	Undefined
Management plan	$F_{MGT}$	?	?	?	Undefined	$SSB_{MGT}$	?	?	?	Undefined
Qualitative evaluation	-	→	→	→	Very low	-	→	→	→	Low

### Catch options

For stocks without information on abundance or exploitation ICES considers that a precautionary reduction of catches should be implemented, unless there is ancillary information clearly indicating that the current level of exploitation is appropriate for the stock (ICES, 2012).

For this stock, current catches are zero. ICES advises that when the precautionary approach is applied, catches should not increase unless there is evidence that this will be sustainable. This corresponds to zero catch in 2015.

**Table 6.3.37.2** Sandeel in the Viking and Bergen banks (SA 5). For stocks in ICES categories 3–6, one catch option is possible. This is highlighted in bold.

Average catch (2012, 2013, 2014)		<b>0 tonnes</b>
Uncertainty cap applied	NA	
Precautionary buffer applied	NA	

### Basis of the advice

**Table 6.3.37.3** Sandeel in the Viking and Bergen banks (SA 5). The basis of the advice.

Advice basis	Precautionary approach.
Management plan	There is no ICES-evaluated management plan for sandeel in this area.

### Quality of the assessment

The available information is inadequate to evaluate stock status or trends.

### Issues relevant for the advice

The Norwegian acoustic survey conducted in the Viking Bank during 2005–2014 indicates that the stock in this area is very small. Norway closed fisheries in the Viking Bank area in 2011 because of very low estimates of sandeel abundance based on acoustic surveys in 2007–2010 (ICES, 2010).

**Figure 6.3.37.2** Sandeel in the Viking and Bergen banks (SA 5). Sandeel are largely sedentary after settlement and form a complex of local (sub-) stocks in the North Sea. To avoid local depletion, ICES advice for sandeel is provided separately for seven areas in Division IIIa and Subarea IV. Advice for sandeel in the Viking and Bergen banks (SA 5) specifically applies to sandeel in rectangles 47–51 E6 + F0–F5 and 52 E6–F5.

**Reference points**

No reference points are defined for sandeel in this area.

**Basis of the assessment**

**Table 6.3.37.4** Sandeel in the Viking and Bergen banks (SA 5). The basis of the assessment.

ICES stock data category	5.3.0 (ICES, 2015a).
Assessment type	No assessment (ICES, 2015b).
Input data	Commercial catch statistics.
Discards and bycatch	Discarding is considered to be negligible.
Indicators	None.
Other information	Last benchmark in 2010 ( <a href="#">ICES, 2010</a> ).
Working group	Herring Assessment Working Group ( <a href="#">HAWG</a> ).

**Information from stakeholders**

There is no information available.

### History of advice, catch, and management

**Table 6.3.37.5** Sandeel in the Viking and Bergen banks (SA 5). History of ICES advice, the agreed TAC, and ICES estimates of catches. All weights are in thousand tonnes.

Year	ICES advice	Catch corresponding to advice	TAC	ICES catch SA 5	Total ICES catch (SAs 1–7)
2005 *	Exploitation to be kept below the level of 2003. Adjustment to be made conditional on the abundance of the 2004 year class.	-	661 **	0	177
2006 *	The fishery should remain closed until information is available which assures that the stock can be rebuilt to $B_{pa}$ by 2007.	-	300 **	0	293
2007 *	The fishery should remain closed until information is available which assures that the stock can be rebuilt to $B_{pa}$ by 2008.	-	173 **	0	230
2008 *	The fishery should only be allowed if monitoring information is available and shows that the stock can be rebuilt to $B_{pa}$ by 2009.	-	375 **	0	348
2009 *	The fishery should only be allowed if monitoring information is available and shows that the stock can be rebuilt to $B_{pa}$ by 2010.	-	377 **	0	353
2010 *	The fishery should only be allowed if monitoring information is available and shows that the stock can be rebuilt to $B_{pa}$ by 2011.	-	377 **	0	414
2011	No increase in effort unless there is evidence that this is sustainable.	0	0	0	
2012	No increase in catches unless there is evidence that this is sustainable.	0	0	0	
2013	ICES advises on the basis of the approach to data-limited stocks that catches should not increase.	0	0	0	
2014	ICES advises on the basis of the approach to data-limited stocks that catches should not increase. This corresponds to zero catch.	0	0	0 ****	
2015	ICES advises that applying the precautionary approach catches should not increase unless there is evidence that this will be sustainable. This corresponds to zero catch.	0
