

## Black-bellied anglerfish (*Lophius budegassa*) in divisions 8.c and 9.a (Cantabrian Sea, Atlantic Iberian waters)

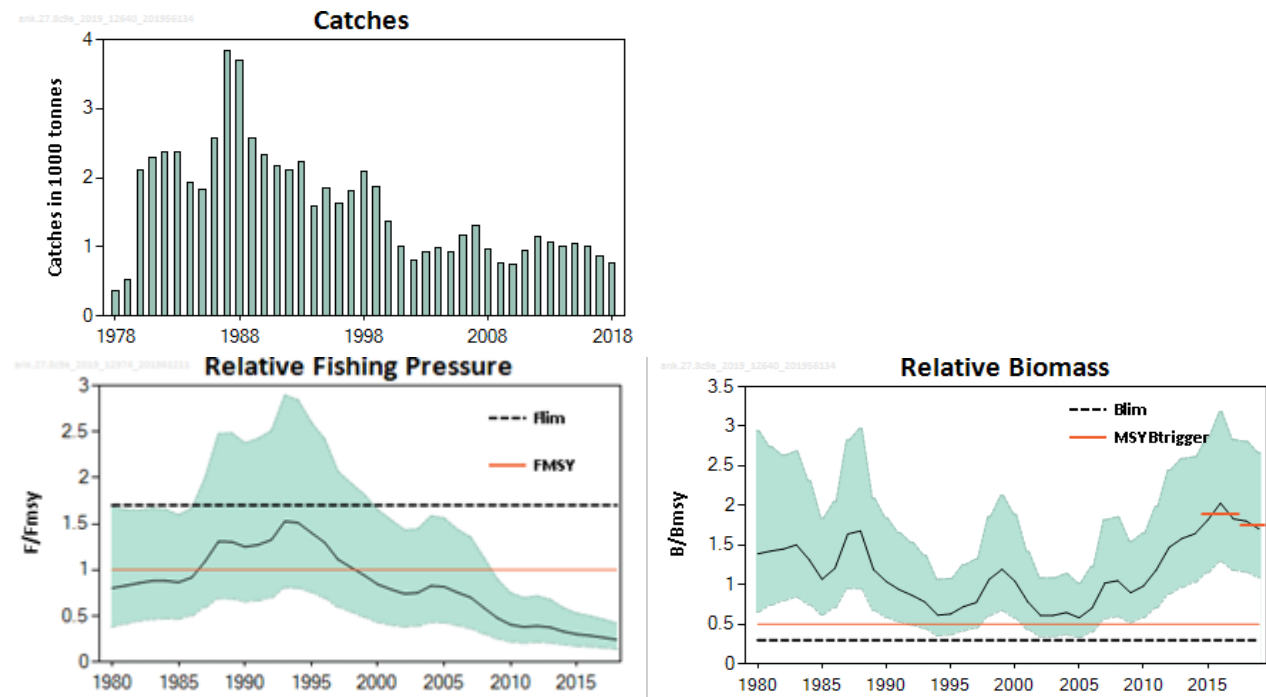

### ICES advice on fishing opportunities

ICES advises that when the precautionary approach is applied, catches in 2020 should be no more than 2050 tonnes.

Management of catches of the two anglerfish species, *Lophius budegassa* and *L. piscatorius*, under a combined species total allowable catch (TAC) prevents effective control of the single-species exploitation rates and could lead to the overexploitation of either species.

### Stock development over time

The assessment is indicative of trends only. The stock biomass (B) increased from 2005 to 2016 and has since decreased. Fishing mortality (F) has decreased since 1994.

**Figure 1** Black-bellied anglerfish in divisions 8.c and 9.a. Summary of the stock assessment: Catches (top left), relative fishing pressure (bottom left), and relative biomass (bottom right) with 95% confidence intervals (shaded area). Fishing pressure and biomass are relative to the average of the time-series. The dashed red lines indicate the average of the relative biomass for 2015 to 2017, and for 2018 to 2019.

### Stock and exploitation status

ICES assesses that fishing pressure on the stock is below  $F_{MSY}$  and  $F_{lim}$ , and that the spawning stock size is above  $MSY B_{trigger}$  and  $B_{lim}$ .

**Table 1** Black-bellied anglerfish in divisions 8.c and 9.a. State of the stock and fishery relative to reference points.

		Fishing pressure			Stock size					
		2016	2017	2018	2017	2018	2019			
Maximum sustainable yield	$F_{MSY}$ proxy	✓	✓	✓	Below proxy	$MSY$ $B_{trigger}$	✓	✓	✓	Above trigger
Precautionary approach	$F_{pa}$ , $F_{lim}$	✓	✓	✓	Below possible reference points	$B_{pa}$ , $B_{lim}$	✓	✓	✓	Full reproductive capacity
Management plan	$F_{MGT}$	✓	✓	✓	Below $F_{MSY}$ proxy	$B_{MGT}$	✓	✓	✓	Above trigger
Qualitative evaluation	-	→	↘	↘	Decreasing	-	↘	↘	↘	Decreasing

### Catch scenarios

The ICES framework for category 3 stocks was applied (ICES, 2012). The relative biomass estimates from the SPiCT analysis were used as the index of stock development. The advice is based on the ratio of the mean of the two latest index values (index A) and the mean of the three preceding values (index B), multiplied by the recent advised catch.

The index is estimated to have decreased by less than 20% and thus the uncertainty cap was not applied.

The fishing mortality is below, and the stock size above, proxies of the MSY reference points. No additional precautionary buffer was, therefore, applied.

Discarding is considered negligible.

**Table 2** Black-bellied anglerfish in divisions 8.c and 9.a. The catch scenario table.\*

Index A (2018–2019)		1.75
Index B (2015–2017)		1.89
Index ratio (A/B)		0.93
Uncertainty cap	Not applied	-
Advised catch for 2019 issued in 2018		2212 tonnes
Unwanted catch rate		Negligible
Precautionary buffer	Not applied	-
Catch advice **		2050
% advice change ^		-7.3%

\*The figures in the table are rounded. Calculations were done with unrounded inputs and computed values may not match exactly when calculated using the rounded figures in the table.

\*\* [Advice for 2019] × [index ratio].

^ Advice value 2020 relative to the advice value 2019 (2212 tonnes).

The advice is reduced by 7.3% compared to the advice for 2019, reflecting the change in biomass over the past five years.

### Quality of the assessment

This stock was benchmarked in 2018 (ICES, 2018a).

The assessment is dependent on commercial landing per unit effort (lpue) series only. Consistency in data gathering and calculation needs to be improved. Stock status estimates are considered to be robust in relation to reference points.

Figure 2 Black-bellied anglerfish in divisions 8.c and 9.a. Relative historical assessment results. This stock was benchmarked in 2018 (ICES, 2018).

### Basis of the assessment

**Table 3** Black-bellied anglerfish in divisions 8.c and 9.a. The basis of the advice.

Advice basis	Precautionary approach
Management plan	The EU multiannual plan (MAP; EU, 2019) for stocks in the Western Waters and adjacent waters applies to this stock. The MAP stipulates that when the $F_{MSY}$ ranges are not available, fishing opportunities should be based on the best available scientific advice.

### Issues relevant for the advice

The two anglerfish species (*L. piscatorius* and *L. budegassa*) are not completely separated in the landings. A single TAC covers both, and species-specific landings are estimated by ICES (ICES, 2019). ICES considers that management of the catches of the two anglerfish species under a combined TAC prevents effective control of single-species exploitation rates, and could lead to overexploitation of either species.

## Reference points

**Table 4** Black-bellied anglerfish in divisions 8.c and 9.a. Reference points, values, and their technical basis.

Framework	Reference point	Relative value *	Technical basis	Source
MSY approach	MSY $B_{\text{trigger proxy}}$	$0.5 \times B_{\text{MSY proxy}} = 0.25 \times K$	Relative value. $B_{\text{MSY proxy}}$ is estimated directly from the assessment model and changes when the assessment is updated.	ICES (2018a, 2018d)
	$F_{\text{MSY proxy}}$	$r/2$	Relative value. The $F_{\text{MSY proxy}}$ is estimated directly from the assessment model and changes when the assessment is updated.	ICES (2018a, 2018d)
Precautionary approach	$B_{\text{lim proxy}}$	$0.3 \times B_{\text{MSY proxy}}$	Relative value (equilibrium yield at this biomass is 50% of the MSY proxy).	ICES (2018a, 2018d)
	$B_{\text{pa}}$	Not defined		
	$F_{\text{lim proxy}}$	$1.7 \times F_{\text{MSY proxy}}$	Relative value (the F that drives the stock to the proxy of $B_{\text{lim}}$ ).	ICES (2018a, 2018d)
	$F_{\text{pa}}$	Not defined		
Management plan	$SSB_{\text{mgt}}$	Not applicable		
	$F_{\text{mgt}}$	Not applicable		
	MAP MSY $B_{\text{trigger}}$	$0.5 \times B_{\text{MSY proxy}} = 0.25 \times K$	MSY $B_{\text{trigger proxy}}$	ICES (2018a, 2018d), EU (2019)
	MAP $B_{\text{lim}}$	$0.3 \times B_{\text{MSY proxy}}$	$B_{\text{lim proxy}}$	ICES (2018a, 2018d), EU (2019)
	MAP $F_{\text{MSY}}$	$r/2$	$F_{\text{MSY proxy}}$	ICES (2018a, 2018d), EU (2019)
	MAP range $F_{\text{lower}}$	Not applicable		
	MAP range $F_{\text{upper}}$	Not applicable		

\* Fishing mortality is estimated only in relation to the  $F_{\text{MSY proxy}}$ , and total stock biomass is estimated only in relation to the  $B_{\text{MSY proxy}}$ . These reference points are only used to assess stock status for the application of the PA buffer. K is the carrying capacity and r is the intrinsic biomass growth rate.

## Basis of the assessment

**Table 5** Black-bellied anglerfish in divisions 8.c and 9.a. Basis of the assessment and advice.

ICES stock data category	3 ( <a href="#">ICES, 2018c</a> ).
Assessment type	Relative results of surplus production model (SPiCT; ICES, 2018a, 2018b) that uses landings in the model.
Input data	Commercial catches (international landings); three commercial indices (SPCORTR8c 1982–2012, PT.crust.tr 1989–2018, and PT.fish.tr 1989–2018).
Discards and bycatch	Discarding is assumed to be negligible.
Indicators	None.
Other information	Last benchmark in 2018 (ICES, 2018a).
Working group	Working Group for the Bay of Biscay and the Iberian Waters Ecoregion ( <a href="#">WGBIE</a> ).

## Information from stakeholders

There is no additional available information.
