

## Portuguese dogfish (*Centroscymnus coelolepis*, *Centrophorus squamosus*) in subareas 1–10, 12, and 14 (the Northeast Atlantic and adjacent waters)

### ICES advice on fishing opportunities

ICES advises that when the precautionary approach is applied, there should be zero catches in each of the years 2020–2023.

### Stock development over time

Landings of deep-water sharks (primarily leafscale gulper shark and Portuguese dogfish) peaked in 2001–2004, but declined thereafter in response to restrictive management measures.

**Figure 1** Portuguese dogfish in the Northeast Atlantic. Combined landings (tonnes) of deep-water sharks (primarily relating to leafscale gulper shark and Portuguese dogfish between 1988 and 2004; 2005–2018 data refer solely to Portuguese dogfish).

### Stock and exploitation status

ICES cannot assess the stock and exploitation status relative to maximum sustainable yield (MSY) and precautionary approach (PA) reference points, because the reference points are undefined.

**Table 1** Portuguese dogfish in the Northeast Atlantic. State of the stock and fishery relative to reference points.

		Fishing pressure			Stock size					
		2016	2017	2018	2016	2017	2018			
Maximum sustainable yield	$F_{MSY}$	?	?	?	Unknown	$MSY B_{trigger}$	?	?	?	Unknown
Precautionary approach	$F_{pa}, F_{lim}$	?	?	?	Unknown	$B_{pa}, B_{lim}$	?	?	?	Unknown
Management plan	$F_{MGT}$	—	—	—	Not applicable	$B_{MGT}$	—	—	—	Not applicable
Qualitative evaluation	-	?	?	?	Unknown	-	?	?	?	Unknown

### Catch scenarios

The ICES framework for category 6 was applied (ICES, 2012). For stocks without information on abundance or exploitation, ICES considers that a precautionary reduction of catches should be implemented unless there is ancillary information clearly indicating that the current level of exploitation is appropriate for the stock.

Discarding is known to take place, but ICES cannot quantify the corresponding catch.

**Table 2** Portuguese dogfish in the Northeast Atlantic. Basis for the catch scenario.

Recent advised catch 2016–2019 (issued in 2015)	0 tonnes	
Discard rate	Unknown	
Precautionary buffer	Not applied (not applicable)	-
Catch advice	0 tonnes	
% Advice change*	0%	

\* Advice value for 2020–2023 relative to the advice value for 2016–2019.

The advice for 2020–2023 has not changed from the previous advice.

### Basis of the advice

**Table 3** Portuguese dogfish in the Northeast Atlantic. The basis of the advice.

Advice basis	Precautionary approach
Management plan	ICES is not aware of any agreed precautionary management plan for Portuguese dogfish in this area.

### Quality of the assessment

The main fishing nations previously reported landings of Portuguese dogfish combined with other deep-water sharks, mainly leafscale gulper shark, in categories such as “siki sharks”. Historical catches are therefore uncertain.

### Issues relevant for the advice

This stock is classified as Category 2 in the [NEAFC categorization of deep-sea species/stocks](#) which implies that NEAFC requires measures stipulating that directed fisheries are not authorized and that bycatches should be minimized.

Total landings have been reduced to low levels compared to the historical landings (ICES, 2018a). Given the management measures currently in place for deep-water fisheries, it is likely that fishing effort has reduced.

The only available survey data, from the Scottish deep-water survey, are currently not considered to be informative given the limited spatial and temporal coverage. A longline survey initiated recently in the Bay of Biscay will increase spatial survey coverage.

### Reference points

No reference points are defined for this stock.

### Basis of the assessment

**Table 4** Portuguese dogfish in the Northeast Atlantic. The basis of the assessment.

ICES stock data category	6 ( <a href="#">ICES, 2018b</a> ).
Assessment type	No assessment (ICES, 2019).
Input data	Landings.
Discards and bycatch	Unknown.
Indicators	None.
Other information	Scottish deep-water survey.
Working group	Working Group on Elasmobranch Fishes ( <a href="#">WGEF</a> ).

### Information from stakeholders

There is no additional available information.

## History of advice, catch, and management

**Table 5** Portuguese dogfish in the Northeast Atlantic. History of ICES advice, the agreed TAC, and ICES estimates of landings in EU and non-EU waters. Weights are in tonnes. \*

Year	ICES advice	Catch corresponding to advice **	Agreed EU TAC for deep-water sharks ***	ICES Landings ^
2001	No advice	-	-	10105
2002	Reduce exploitation	-	-	8093
2003	No advice	-	-	10876
2004	No advice	-	-	9031
2005	Zero catch	0	7020	1536
2006	No new advice, same as for 2005	0	7020	1060
2007	TAC = 0, prevent bycatch	0	2591	472
2008	No new advice, same as for 2007	0	1715	347
2009	Zero catch	0	859	110
2010	No new advice, same as for 2009	0	0^^	58
2011	Zero catch	0	0^^	2.5
2012	No new advice, same as for 2011	0	0	4.4
2013	Zero catch	0	0	2.2
2014	No new advice, same as for 2013	0	0	5.3
2015	No new advice, same as for 2014	0	0	0.61
2016	Precautionary approach, fishing mortality minimized and no targeted fisheries	0	0	0.17
2017	Quadrennial advice	0	20	3.1
2018	Quadrennial advice	0	20	2.2
2019	Quadrennial advice	0	14	
2020	Precautionary approach	0	14	
2021	Same advice as in 2020	0		
2022	Same advice as in 2020	0		
2023	Same advice as in 2020	0		

\* Figures were revised in 2019 following data revision from WKSHARK2 (ICES, 2016).

\*\* Advice prior to 2013 was for Portuguese dogfish and leafscale gulper shark combined.

\*\*\* A bycatch TAC of deep-water sharks was allowed, for 2017–2020, in the deep-sea longline fisheries targeting the black scabbardfish (EU, 2016, 2018).

^ Combined landings for Portuguese dogfish and leafscale gulper shark (this may also include other deep-water shark species) before 2005.

^^ Bycatches of up to 10% (2010) and 3% (2011) of the 2009 TAC permitted.

## History of catch and landings

The distribution of this stock extends into the NEAFC Regulatory Area, but the proportional split of catches cannot be determined.

**Table 6** Portuguese dogfish in the Northeast Atlantic. Catch distribution by fleet of Portuguese dogfish in 2018 as estimated by ICES.

Catch (2018)	Landings	Discards
Unknown	Hooks and lines 100%	Unknown
	2.2 tonnes	

**Table 7** Portuguese dogfish in the Northeast Atlantic. History of commercial landings (ICES estimates) of Portuguese dogfish in EU and non-EU waters, presented by country participating in the fishery (in tonnes). Landings are combined for leafscale gulper shark and Portuguese dogfish until 2004; from 2005 onwards landings are presented only for Portuguese dogfish. + = catches less than 0.5 tonnes.
