

## Cod (*Gadus morhua*) in subdivisions 24–32, eastern Baltic stock (eastern Baltic Sea)

### ICES advice on fishing opportunities

ICES advises that when the precautionary approach is applied, there should be zero catch in 2021. This advice applies to all catches from the stock in subdivisions 24–32.

*Note: This advice is abbreviated due to the Covid-19 disruption. The previous advice issued for 2020 is attached as Annex 1.*

### Stock development over time

**Figure 1** Cod in subdivisions 24–32, eastern Baltic stock. Summary of the stock assessment. R, F, and SSB (spawning-stock biomass at the spawning time) show confidence intervals (90%) in the plot. Assumed R values are unshaded.

### Stock and exploitation status

**Table 1** Cod in subdivisions 24–32, eastern Baltic stock. State of the stock and the fishery relative to reference points.

|                           | Fishing pressure  |      |      | Stock size        |                |                |
|---------------------------|-------------------|------|------|-------------------|----------------|----------------|

|                           |                   |      |      |                   | —              | Not applicable |

## Catch scenarios

**Table 2** Cod in subdivisions 24–32, eastern Baltic stock. Assumptions made for the interim year and in the forecast. Weights are in tonnes. Recruitment is in thousands.

| Variable                           | Value     | Notes  |
|------------------------------------|-----------|--|
| $F_{\text{ages } 4-6}$ (2020)      | 0.08      | F based on catch constraint.                           |
| SSB (2020)                         | 68 652    | From assessment.                                       |
| $R_{\text{age } 0}$ (2019–2022)    | 2 052 590 | Average of 2014–2018.                                  |
| $M_{\text{ages } 4-6}$ (2020–2022) | 0.71      | Natural mortality estimated by the assessment in 2019. |
| Total catch (2020)                 | 7500      | EU TAC 2000 tonnes + Russian quota 5500 tonnes.        |

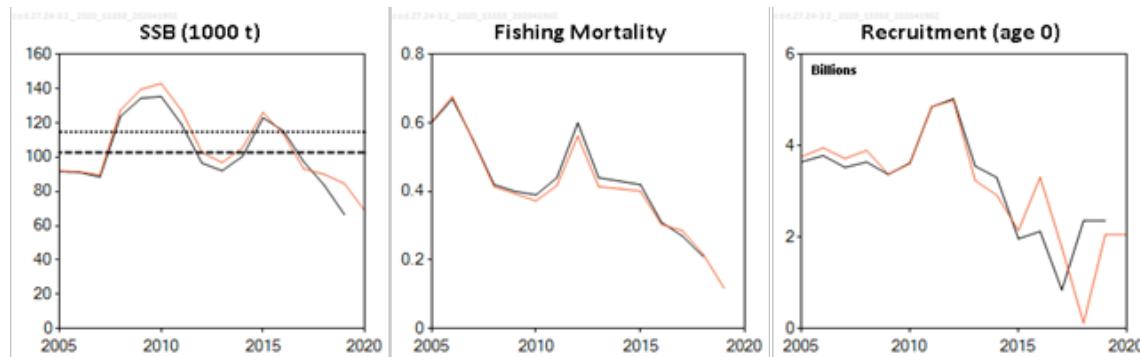

**Table 3** Cod in subdivisions 24–32, eastern Baltic stock. Annual catch scenarios. All weights are in tonnes.

| Basis                     | Total catch (2021) | F (2021) | SSB (2021) | SSB (2022) | Probability of SSB (2022) > $B_{\text{lim}}$ (%) | % SSB change | % Catch change** |
|---------------------------|--------------------|----------|------------|------------|--|--------------|------------------|
| ICES advice basis         |                    |          |            |            |  |              |                  |
| F = 0                     | 0                  | 0        | 61169      | 67233      | < 0.01   | 10           | -100             |
| Other scenarios           |                    |          |            |            |  |              |                  |
| F = 0.05                  | 4133               | 0.050    | 59411      | 64082      | < 0.01   | 8            | -65              |
| F = F (2019)              | 9390               | 0.117    | 57155      | 60033      | < 0.01   | 5            | -21              |
| Catch = TAC (2020)        | 7500               | 0.097    | 57914      | 61204      | < 0.01   | 6            | -37              |
| Catch = 0.75 × TAC (2020) | 5625               | 0.072    | 58711      | 62717      | < 0.01   | 7            | -53              |
| Catch in SD24*            | 1532               | 0.019    | 60504      | 66005      | < 0.01   | 9            | -87              |

\* Due to the mixed fisheries for eastern and western Baltic cod in Subdivision (SD) 24, it would be expected that 1532 tonnes of eastern Baltic cod is harvested in SD 24 in 2021, when the commercial catch of 4635 tonnes is taken from the western Baltic cod stock (see Table 5 in ICES, 2020a). It is assumed that the geographical distribution of commercial catches from the western stock in 2021 is the same as observed in 2019 (26% in SD 24), and the ratio between eastern and western stock in the commercial cod catch in SD 24 is the same as observed in 2019 (1.27).

\*\*Catch in 2021 compared to catch in 2019 (11 938 tonnes).

## Quality of the assessment

**Figure 2** Cod in subdivisions 24–32, eastern Baltic stock. Historical assessment results (final-year recruitment estimates included). The stock was benchmarked in 2019.

## Reference points

**Table 4** Cod in subdivisions 24–32, eastern Baltic stock. Reference points, values, and their technical basis.

| Framework              | Reference point      | Value     | Technical basis  | Source       |

\* For the total Baltic Sea until and including 2003.

\*\* The reported landings in 1992–1995 and 2000–2009 are likely to be minimum estimates due to incomplete reporting.

\*\*\* TAC is for SDs 25–32 and is calculated as EU + Russian autonomous quotas.

<sup>^</sup> ICES provides stock-based advice (for the eastern Baltic cod stock).

### Summary of the assessment

**Table 6** Cod in subdivisions 24–32, eastern Baltic stock. Assessment summary. Weights are in tonnes, recruitment in thousands. High and Low refer to 90% confidence intervals.

| Year | Recruitment<br>(age 0) | Recruitment |         | SSB    |        | Biomass<br>fish $\geq$ 35 cm | Landings* | Discards | Catch in<br>SD 24 | Fishing mortality |      |      |
|------|------------------------|-------------|---------|--------|--------|------------------------------|-----------|----------|-------------------|-------------------|------|------|
