

MGWG

Methods Working Group

Human Activities, Pressures and Impacts Steering Group (HAPISG)

RESEARCH FOCUS

- Present, share, and collaborate on advancing models and methods to be used in ICES expert groups
- Special focus on evaluating and validating technical details of single-species stock assessment models
- Address and prioritize modelling questions posed by other working groups
- Identify need to make training activities available to students and scientists within ICES community

OUR OBJECTIVE

The objective of MGWG is to create the forum where it is possible to study, advance, and share the methods used to generate the results used in other ICES groups: Models are validated and reviewed; New techniques and hard-earned practical experiences are shared among students, early career, and experienced scientists.

OUR EXPERTISE

- Single-species stock assessment models
- Model development
- Model validation
- Model diagnostics
- Model comparisons
- Statistical software
- Statistical techniques in general and within marine science in particular
