

# NS-NETSEA

Network for  
surveys towards  
ecosystem advice  
in the Greater  
North Sea  
(starting 2024)

Ecosystem Observation  
Steering Group (EOSG)

## RESEARCH FOCUS

Fishery-independent survey data are generally dealt with on a survey level and not evaluated regionally across surveys.

Our goal is to combine fishery-independent data for the North Sea, in a manner that is useful for data end-users (i.e. North Sea integrated ecosystem and/or stock assessment).

## OUR OBJECTIVE

We combine data from different fishery-independent surveys on a regional level (Greater North Sea), with survey experts and data users.

The NS-NETSEA will have an annual in-person meeting, and a core group meeting four times a year to keep track of the actions, and to prepare the annual meeting.

## OUR MAIN FOCUS

- Synthesize and compare survey information on a regional level for integrated ecosystem and stock assessment, or benchmark processes.
- Provide quality assured fishery-independent survey information to data end-users on a regional level.
- Improve alignment on common issues for all fishery-independent survey types in the Greater North Sea.

## OUR CHAIR

Ingeborg de Boois

We are looking for core group participants, scan the QR code for more information.
