

Human Dimension Steering Group (HUDISG)

# WGHIST

Working Group on the  
History of Fish and  
Fisheries

## RESEARCH FOCUS

- Collect, assemble and integrate data and meta-data on marine socio-ecological system through time. Understand how data can be integrated and how different disciplines can work together.
- Evaluate **long-term changes** in marine socio-ecological systems and understand how this knowledge can be **applied to contemporary management**.
- Explore the **utility of using unconventional sources** of data to understand social and ecological trends and see **how societies responded to past events**.

## OUR OBJECTIVE

- Provide a space in which people from different backgrounds working on marine historical ecology can **meet, discuss ideas, exchange data and work together**.
- Make marine historical ecology **research and data more visible** to the ICES and marine community.

## OUR EXPERTISE

- We are a **mixed group** of ecologists, palaeontologists, historians, archaeologists.
- Expert at working in **interdisciplinary teams**
- We **deal with historical and unconventional data** (e.g. pictures, historical text books, oral data, archaeological samples) to unravel **past human impacts and changes in marine socio-ecological systems**.

## OUR CHAIRS

Bryony  
Caswell

Camilla Sguotti

Jacopo Bernardi
