RESEARCH FOCUS

WGIEAGS works to provide an Ecosystem Overview and identify trends, knowledge gaps and research priorities for the region. The Greenland Sea ICES ecoregion encompasses both open sea and shelf waters along the Eastern coast of Greenland.

- Collate data for describing spatial and temporal changes.
- Scoping, indicator development and risk analysis for the Integrated Ecosystem Assessment.
- Report on status and trends.
- Identify knowledge gaps and recommendations for data collection and monitoring.

OUR OBJECTIVE

- Describe the ecosystem.
- Describe oceanographic trends.
- Assess linkages between the physical, chemical and biological oceanographic conditions.
- Assess human impact and general pressures of the ecosystem.

OUR EXPERTISE

- Physical oceanography and climate.
- Plankton biology and ecology.
- Fish, seabird and marine mammal biology and assessments.
- Social science.
