

WGCEPH

Working Group on Cephalopod Fisheries and Life History

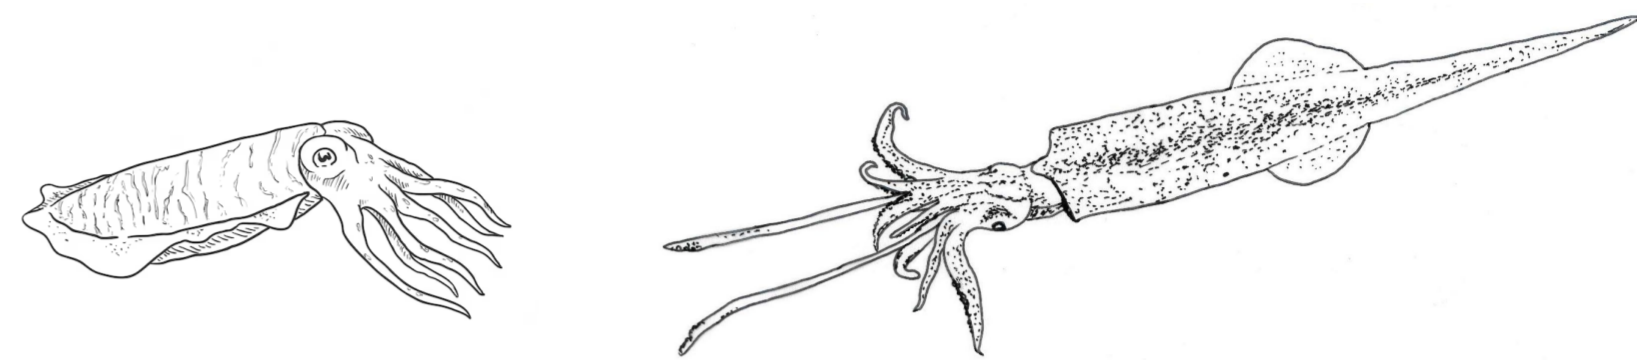

Ecosystem Processes and Dynamics
Steering Group (EPDSG)

RESEARCH FOCUS

- Report on cephalopod stock status.
- Review assessment methods for use with cephalopod fisheries and within the Marine Strategy Framework Directive.
- Review advances in knowledge of cephalopod life history and ecology.
- Update routine biological and fishery data collection.
- Better understanding of the socio-economic dimensions, markets, and value chains of cephalopod fisheries.
- Develop simple climate envelope models of cephalopod species.

OUR OBJECTIVE

We improve knowledge about the life history and the assessment of cephalopods as an exploited resource. We are interested in cephalopod biology, ecology, fisheries, and stock assessment and work on effectiveness in sampling and monitoring their fisheries.

OUR EXPERTISE

- Cephalopod biology and ecology
- Monitoring cephalopod fisheries under Data Collection Framework
- Population dynamics of cephalopod stocks, including abundance indices and tools for their assessment and management
- Socio-economic sustainability of cephalopod fisheries
- Cephalopod distribution in a changing ocean
