

# What is **TAF**?

The Transparent Assessment Framework (TAF) is an online open resource of ICES stock assessments for each assessment year. All data input and output is fully traceable and versioned.

The open framework enables anyone to easily find, reference, download, and run the assessment from any stage in the process leading to the published ICES advice for a given stock.

TAF is a framework developed by ICES to organize data, methods, and results used in fish stock assessments, so they are easy to reference and re-run with new data or methods.

TAF assessments are stored and made visible on GitHub:

<https://github.com/ices-taf>

And through the online application at:

[taf.ices.dk](http://taf.ices.dk)
