As background to the joint session at the 65th Statutory meeting, of the Gear and Behaviour and the Fisheries Improvement Committees on interaction between the fishing industry and the offshore oil/gas industries, it was decided to produce a list of some recent relevant publications. The list concentrates on direct interactions between fishing and offshore industry operations, and gives only a few major references to pollution by oil and related topics. It is not intended that this list should be comprehensive, but it is hoped that it will provide an entry to the literature and could form the basis of a fuller documentation.
