

7.3.29 Sea bass (*Dicentrarchus labrax*) in Divisions VIIIc and IXa (Bay of Biscay South, Atlantic Iberian Waters)

ICES stock advice

ICES advises that when the precautionary approach is applied, commercial catches should be no more than 598 tonnes in each of the years 2016 and 2017. All commercial catches are assumed to be landed. Recreational catches cannot be quantified; therefore, total catches cannot be calculated.

Stock development over time

The commercial landings in the last two decades have been variable. Recreational catch is unknown but may be significant.

Figure 7.3.29.1 Sea bass in Divisions VIIIc and IXa. ICES estimated commercial landings (in tonnes), the 2014 data are preliminary.

Stock and exploitation status

Table 7.3.29.1 Sea bass in Divisions VIIIc and IXa. State of the stock and fishery relative to reference points.

		Fishing pressure				Stock size				
		2012	2013	2014		2012	2013	2014		
Maximum Sustainable Yield	F_{MSY}	?	?	?	Undefined	$MSY B_{trigger}$?	?	?	Undefined
Precautionary approach	F_{pa}, F_{lim}	?	?	?	Undefined	B_{pa}, B_{lim}	?	?	?	Undefined
Management Plan	F_{MGT}	-	-	-	Not applicable	SSB_{MGT}	-	-	-	Not applicable
Qualitative evaluation	-	?	?	?	Unknown	-	?	?	?	Unknown

Catch options

The ICES framework for category 5 stocks was applied (ICES, 2012a). For stocks without information on abundance or exploitation, ICES considers that a precautionary reduction of catches should be implemented unless there is ancillary

information clearly indicating that the current level of exploitation is appropriate for the stock. The precautionary buffer was applied in 2013 (for the 2014 advice); therefore, it is not applied this year again.

Table 7.3.29.2 Sea bass in Divisions VIIIc and IXa. For stocks in ICES data categories 3-6, one catch option is possible.

Recent advised commercial catch	598 tonnes	
Discard rate	Negligible	
Precautionary buffer	Not applied	-
Commercial catch advice*	598 tonnes	

* Recent advised commercial catch

Basis of the advice

Table 7.3.29.3 Sea bass in Divisions VIIIc and IXa. The basis of the advice.

Advice basis	Precautionary approach
Management plan	There is no management plan for sea bass in this area.

Quality of the assessment

Recreational fisheries are likely to contribute substantially to fishery removals in some areas. Time-series of catches, releases, and size/age composition are needed from this component of the fishery to improve the assessment and advice.

Stock structure is poorly understood and further studies (including tagging, genetics, or other types of markers) are needed.

Historical sampling of the commercial catches is of variable quality and data sampling should cover all fleets involved in this fishery. Time-series of relative abundance indices are needed for both the adult and pre-recruit components of the stock.

Issues relevant for the advice

There is no information to present for this stock.

Reference points

No reference points are defined for this stock.

Basis of the assessment

Table 7.3.29.4 Sea bass in Divisions VIIIc and IXa. The basis of the assessment.

ICES stock data category	5.2.0 (ICES, 2015a)
Assessment type	No assessment (ICES, 2015b)
Input data	Commercial landings
Discards and bycatch	Commercial discards are unknown, but considered to be negligible.
Indicators	None
Other information	This stock was benchmarked in IBPNew 2012 (ICES, 2012b).
Working group	Working Group for the Bay of Biscay and the Iberian Waters Ecoregion (WGBIE)

Information from stakeholders

There is no available information.

History of advice, catch and management

Table 7.3.29.5 Sea bass in Divisions VIIIc and IXa. History of ICES advice, the agreed TAC, and both ICES estimated and official landings. All weights are in tonnes.

Year	ICES Advice *	Predicted catch corresponding to advice	Agreed TAC	Official landings ***	ICES landings
2000	-	-	none	380	775
2001	-	-	none	277	635
2002	No increase in effort or F	-	none	172	518
2003	No increase in effort or F	-	none	161	466
2004	No increase in effort or F	-	none	362	676

2015	Same advice as last year	< 598			
2016	Precautionary approach	≤ 598			
2017	Precautionary approach	≤ 598			

* 2014 is the first time that ICES provides specific advice for sea bass in Divisions VIIIc and IXa. Prior to the 2014 advice, ICES advice was provided for European sea bass in the Northeast Atlantic.

** Preliminary.

*** Official landings were extracted from the ICES Official Statistics webpage for BSS and Divisions VIIIc and IXa. The difference between ICES statistics and the official statistics are mainly due to the fact that prior to 2006 most of the sea bass catches in the Portuguese statistics were registered under the code BSE, i.e. (*Dicentrarchus* spp.). After the DCF implementation there was a progressive increase in the correct identification of species in the official statistics (BSS increase, BSE decrease) that consider *Dicentrarchus* spp. landings minus 2.3% of *Dicentrarchus punctatus* based on DCF market and on-board sampling between 2008 and 2012.

Advice for sea bass in Divisions VIIIc and IXa.

* Preliminary

** Official landings have been extracted from the ICES Official Catch Statistics webpage (15 May 2013) for "BSS" and Divisions VIIIc and IXa and Subarea IX (Subarea IX has been retained for Portuguese statistics because it was reported as Division IXa prior to 2007).

***The difference between ICES statistics and the official statistics are mainly due to the fact that prior to 2006 most of the sea bass catches in the Portuguese statistics were registered under the code BSE, i.e. (*Dicentrarchus* spp.). After the DCF implementation there was a progressive increase in the correct identification of species in the official statistics (BSS increase, BSE decrease) that consider *Dicentrarchus* spp. landings minus 2.3% of *Dicentrarchus punctatus* based on DCF market and on-board sampling between 2008 and 2012.

Summary of the assessment

There is no assessment for sea bass in this area.
